

**Marking Scheme**  
**Strictly Confidential**  
**(For Internal and Restricted use only)**  
**Senior School Certificate Examination, 2025**  
**SUBJECT PHYSICS (042) (PAPER CODE 55/7/3)**

**General Instructions: -**

<b>1</b>	You are aware that evaluation is the most important process in the actual and correct assessment of the candidates. A small mistake in evaluation may lead to serious problems which may affect the future of the candidates, education system and teaching profession. To avoid mistakes, it is requested that before starting evaluation, you must read and understand the spot evaluation guidelines carefully.
<b>2</b>	<b>“Evaluation policy is a confidential policy as it is related to the confidentiality of the examinations conducted, Evaluation done and several other aspects. Its’ leakage to public in any manner could lead to derailment of the examination system and affect the life and future of millions of candidates. Sharing this policy/document to anyone, publishing in any magazine and printing in News Paper/Website etc may invite action under various rules of the Board and IPC.”</b>
<b>3</b>	Evaluation is to be done as per instructions provided in the Marking Scheme. It should not be done according to one’s own interpretation or any other consideration. Marking Scheme should be strictly adhered to and religiously followed. <b>However, while evaluating, answers which are based on latest information or knowledge and/or are innovative, they may be assessed for their correctness otherwise and due marks be awarded to them. In class-X, while evaluating two competency-based questions, please try to understand given answer and even if reply is not from marking scheme but correct competency is enumerated by the candidate, due marks should be awarded.</b>
<b>4</b>	The Marking scheme carries only suggested value points for the answers These are in the nature of Guidelines only and do not constitute the complete answer. The students can have their own expression and if the expression is correct, the due marks should be awarded accordingly.
<b>5</b>	The Head-Examiner must go through the first five answer books evaluated by each evaluator on the first day, to ensure that evaluation has been carried out as per the instructions given in the Marking Scheme. If there is any variation, the same should be zero after deliberation and discussion. The remaining answer books meant for evaluation shall be given only after ensuring that there is no significant variation in the marking of individual evaluators.
<b>6</b>	Evaluators will mark(√) wherever answer is correct. For wrong answer CROSS ‘X’ be marked. Evaluators will not put right (✓)while evaluating which gives an impression that answer is correct and no marks are awarded. <b>This is most common mistake which evaluators are committing.</b>
<b>7</b>	If a question has parts, please award marks on the right-hand side for each part. Marks awarded for different parts of the question should then be totaled up and written in the left-hand margin and encircled. This may be followed strictly.

<b>8</b>	If a question does not have any parts, marks must be awarded in the left-hand margin and encircled. This may also be followed strictly.
<b>9</b>	If a student has attempted an extra question, answer of the question deserving more marks should be retained and the other answer scored out with a note <b>“Extra Question”</b> .
<b>10</b>	No marks to be deducted for the cumulative effect of an error. It should be penalized only once.
<b>11</b>	A full scale of marks 70 (example 0 to 80/70/60/50/40/30 marks as given in Question Paper) has to be used. Please do not hesitate to award full marks if the answer deserves it.
<b>12</b>	Every examiner has to necessarily do evaluation work for full working hours i.e., 8 hours every day and evaluate 20 answer books per day in main subjects and 25 answer books per day in other subjects (Details are given in Spot Guidelines). This is in view of the reduced syllabus and number of questions in question paper.
<b>13</b>	Ensure that you do not make the following common types of errors committed by the Examiner in the past:- <ol style="list-style-type: none"> <li>1. Leaving answer or part thereof unassessed in an answer book.</li> <li>2. Giving more marks for an answer than assigned to it.</li> <li>3. Wrong totaling of marks awarded on an answer.</li> <li>4. Wrong transfer of marks from the inside pages of the answer book to the title page.</li> <li>5. Wrong question wise totaling on the title page.</li> <li>6. Wrong totaling of marks of the two columns on the title page.</li> <li>7. Wrong grand total.</li> <li>8. Marks in words and figures not tallying/not same.</li> <li>9. Wrong transfer of marks from the answer book to online award list.</li> <li>10. Answers marked as correct, but marks not awarded. (Ensure that the right tick mark is correctly and clearly indicated. It should merely be a line. Same is with the X for incorrect answer.)</li> <li>11. Half or a part of answer marked correct and the rest as wrong, but no marks awarded.</li> </ol>
<b>14</b>	While evaluating the answer books if the answer is found to be totally incorrect, it should be marked as cross (X) and awarded zero (0)Marks.
<b>15</b>	Any un assessed portion, non-carrying over of marks to the title page, or totaling error detected by the candidate shall damage the prestige of all the personnel engaged in the evaluation work as also of the Board. Hence, in order to uphold the prestige of all concerned, it is again reiterated that the instructions be followed meticulously and judiciously.
<b>16</b>	The Examiners should acquaint themselves with the guidelines given in the <b>“Guidelines for spot Evaluation”</b> before starting the actual evaluation.
<b>17</b>	Every Examiner shall also ensure that all the answers are evaluated, marks carried over to the title page, correctly totaled and written in figures and words.
<b>18</b>	The candidates are entitled to obtain photocopy of the Answer Book on request on payment of the prescribed processing fee. All Examiners/Additional Head Examiners/Head Examiners are once again reminded that they must ensure that evaluation is carried out strictly as per value points for each answer as given in the Marking Scheme.

**MARKING SCHEME : PHYSICS(042)**

**CODE : 55/7/3**

<b>Q.NO.</b>	<b>VALUE POINT/ EXPECTED ANSWERS</b>	<b>MARKS</b>	<b>TOTAL MARKS</b>
<b>SECTION- A</b>			
1.	(C) 30 $\mu\text{C}$	1	1
2.	(C) holes and few electrons	1	1
3.	(C) 2.0 $^{\circ}\text{C}$	1	1
4.	(D) $[\text{ML}^2\text{T}^{-2}\text{A}^{-2}]$	1	1
5.	(C) same neutron number, but different atomic number.	1	1
6.	(B) 0.2 mV	1	1
7.	(B) $3.20 \times 10^{14}$ Hz	1	1
8.	(A) 1/200 s	1	1
9.	(A) $BA \sin \alpha$	1	1
10.	(C) 13.6 eV	1	1
11.	(C) capacitive and inductive respectively	1	1
12.	(A) Both the potential barrier height and width of depletion layer decrease.	1	1
13.	(B) Both Assertion(A) and Reason (R) are true but Reason(R) is <b>not</b> the correct explanation of Assertion(A).	1	1
14.	(D) Both Assertion (A) and Reason (R) are false.	1	1
15.	(B) Both Assertion(A) and Reason (R) are true but Reason(R) is <b>not</b> the correct explanation of Assertion(A).	1	1
16.	(C) Assertion(A) is true and Reason(R) is false.	1	1
<b>SECTION- B</b>

	$\phi_{\text{total}} = \phi_L + \phi_R$ $= 8\pi \times 10^{-2} \text{ Nm}^2/\text{C}$ $= 25.12 \times 10^{-2} \text{ Nm}^2/\text{C}$ <p>Charge <math>q = \epsilon_0 \phi_{\text{total}}</math></p> $= 25.12 \times 10^{-2} \times 8.85 \times 10^{-12}$ $= 0.22 \times 10^{-11} \text{ C}$	$\frac{1}{2}$  $\frac{1}{2}$ $\frac{1}{2}$  $\frac{1}{2}$	3
24.	<div style="border: 1px solid black; padding: 5px; margin-bottom: 10px;"> <p>Reason for</p> <p>(a) Independence of maximum kinetic energy of photoelectrons &amp; intensity of incident radiation 1</p> <p>(b) Increase in photoelectric current with increase in intensity of incident radiation 1</p> <p>(c) Linear variation in stopping potential with frequency of incident radiation 1</p> </div> <p>(a) With the variation in the intensity of incident radiations, there is a change in the number of photons not on the energies of the photons so the maximum kinetic energy of photoelectrons remains same. 1</p> <p>(b) With the increase in intensity of incident radiation number of photons increases as a result photoelectric current increase. 1</p> <p>(c) With the increase in frequency of incident radiation, the maximum kinetic energy of photoelectrons increases. Hence higher value of stopping potential (retarding potential) is required. 1</p> <div style="text-align: center;">  </div> <p><b>Alternatively:</b></p> $K_{\text{max}} = eV_o = h\nu - h\nu_o$	1  1  1	3
25.	<div style="border: 1px solid black; padding: 5px;"> <p>(a) (i) Writing Biot-Savart's Law in vector form 1</p> <p>(ii) Finding magnitude &amp; direction of net magnetic field at centre of two current carrying coils 2</p> </div>		

$$(i) \vec{dB} = \frac{\mu_0}{4\pi} \frac{I(d\vec{l} \times \vec{r})}{r^3}$$

$$(ii) B_1 = \frac{\mu_0 I}{2R}$$

$$B_2 = \frac{\mu_0 \sqrt{3} I}{2R}$$

$$B = \sqrt{B_1^2 + B_2^2}$$

$$\therefore B = \frac{\mu_0 I}{2R} \sqrt{1+3}$$

$$B = \frac{\mu_0 I}{R}$$

$$\tan \theta = \frac{B_1}{B_2} = \frac{1}{\sqrt{3}}$$

Direction of net magnetic field is  $30^\circ$  with direction of  $B_2$  /  $60^\circ$  with the direction of  $B_1$ .

**OR**

- |     |  |   |
|-----|--|---|
| (b) | Writing the expression for magnetic moment & showing its direction | 1 |
|     | Proving no net force   | 1 |
|     | Torque $(\vec{\tau}) = \vec{m} \times \vec{B}$                     |   |

$$(i) \vec{m} = I\vec{A}$$

- (ii)  $F_1 = F_2 = IbB$   $F_1$  = Force on AB into the plane  
 $F_2$  = Force on CD out of the plane

Since forces are equal & opposite so net force = 0

Both of them form a couple and magnitude of torque acting on the coil is

$$\therefore \tau = F_1 \frac{l}{2} \sin \theta + F_2 \frac{l}{2} \sin \theta$$

$$= I b B l \sin \theta$$

$$= I A B l \sin \theta$$

$$= m B \sin \theta$$

$$\vec{\tau} = \vec{m} \times \vec{B}$$

Alternatively:

If the plane of the current carrying coil makes an angle  $\alpha$  with the magnetic field

$$\vec{F}_{DA} = -\vec{F}_{BC} \text{ (cancel each other)}$$

Force on the arm DC is into the plane of the paper

$$|F_{DC}| = IbB$$

Force on the arm AB is out of the plane of the paper.

$$|F_{AB}| = IbB$$

Since forces are equal & opposite so net force = 0

Both of them form a couple and magnitude of torque acting on the coil is

$\tau = \text{either force} \times \text{perpendicular distance between the two forces.}$

$$\tau = IbB \times a \sin \theta$$

(a)	(i) Labelled diagram	1																			
	Working principle of moving coil galvanometer	1																			
	Use of (i) Radial magnetic field	½																			
	(ii) Soft iron core	½																			
	(ii) Defining current sensitivity	1																			
	Reason	1																			

**Principle:** A current carrying coil placed in uniform magnetic field experiences a torque.

(i) Radial magnetic field makes the scale linear

Alternatively: Radial magnetic field provides maximum Torque.

(ii) Use of soft iron core is to increase the strength of magnetic field/ increase sensitivity of the galvanometer.

(ii) **Current sensitivity** is defined as deflection per unit current.

**Alternatively:**

$$I_s = \frac{\Phi}{I} = \frac{NAB}{k}$$

$$\text{Voltage sensitivity } V_s = \frac{\Phi}{V} = \left( \frac{NAB}{k} \right) \frac{I}{V} = \left( \frac{NAB}{k} \right) \frac{I}{R}$$

Increase in number of turns, increases the current sensitivity and resistance of the galvanometer in the same proportion of current sensitivity therefore Voltage sensitivity remains unchanged.

	2												

**I. Along its axis**

$$V_- = \frac{-kq}{x+a}$$

$$V_+ = \frac{kq}{x-a}$$

$$V = V_- + V_+$$

$$= kq \left( \frac{-1}{x+a} + \frac{1}{x-a} \right)$$

$$= kq \frac{2a}{(x^2 - a^2)} = \frac{kp}{x^2 - a^2}$$

$$x \gg a \quad \therefore V = \frac{kp}{x^2}$$

1/2

**II. Along the bisector line**

$$V_- = \frac{kq}{\sqrt{x^2 + a^2}}$$

$$V_+ = \frac{-kq}{\sqrt{x^2 + a^2}}$$

$$V = V_- + V_+ = 0$$

(ii)  $\vec{\tau} = \vec{p} \times \vec{E}$

$$= (0.8\hat{i} + 0.6\hat{j}) \times 10^{-29} \times (1 \times 10^7)\hat{k}$$

$$= [0.8(-\hat{j}) + 0.6\hat{i}] \times 10^{-22}$$

$$\tau = \left[ \sqrt{(0.8)^2 + (0.6)^2} \right] \times 10^{-22}$$

$$= 10^{-22} \text{ Nm}$$

$$\tan \alpha = \frac{|0.8|}{0.6}$$

$$\alpha = \tan^{-1} \left( \frac{4}{3} \right)$$

$$\alpha = 53^\circ$$
